GeneReviews Resource Materials

Stephanie E Wallace, MD^{1,2}

Created: February 12, 2018; Revised: December 7, 2023.

Note: These resource materials, provided by the editors of *GeneReviews*, include the following:

- Educational Materials, intended for individuals of varying experience with clinical genetics and designed to clarify genetics concepts presented in *GeneReviews* chapters – as the *GeneReviews* glossary clarifies our use of genetic counseling and testing terms
- Resources for Genetics Professionals

GeneReviews Resource Materials will be updated as needed, and new materials added as they are completed. Reader comments and suggestions are [welcome](#). — The Editors

Educational Materials

Genetic Testing: Current Approaches (revised 6-18-20)

Introductory Information

Detailed Information for Clinicians Ordering Genetic Tests

References

Resources for Genetics Professionals

Limitations of Clinical Exome Sequencing: Genetic Disorders Not Reliably Diagnosed

Genetic Disorders Caused by Imprinting Errors and Uniparental Disomy Not Detectable by Sequence Analysis (3-14-17)

Genetic Disorders Caused by Nucleotide Repeat Expansions and Contractions (revised 10-20-22)

Genes with Highly Homologous Gene Family Members or a Pseudogene(s) (3-8-18)

Author Affiliations: 1 Senior Editor, *GeneReviews*; Email: editor2@uw.edu. 2 Clinical Professor, Pediatrics, University of Washington, Seattle, Washington; Email: editor2@uw.edu.

Epigenetic Signature Analysis: An Introduction (revised 6-30-22)

An introduction to epigenetic signature analysis and comparison of gene-specific genome-wide methylation analysis and epigenetic modifications to specific regions of the genome

Mosaicism (10-27-22)

The occurrence within a single individual or tissue of two or more cell lines with a different genetic or chromosomal composition, involving somatic cells, germline cells, and/or tumor cells. Implications for molecular genetic testing and genetic counseling are discussed.

Founder Variants by Population: Genes and Disorders (revised 12-7-23)

Pathogenic variants observed at high frequency in specific populations due to the presence of the variant in a single ancestor or small number of ancestors
